HINALEA VNIR ULTRA

SPECIFICATIONS

The **HINALEA VNIR ULTRA** is Hinalea's top of the line VNIR hyperspectral imaging system. Powered by its tunable Fabry–Perot Interferometer, the VNIR ULTRA captures complete 2D images at each wavelength, producing high-quality hyperspectral data cubes without mechanical scanning.

Designed for laboratory research, the VNIR ULTRA delivers high spectral fidelity, excellent spatial resolution, and flexible system integration and high sensitivity even for light or photon limited specimens.
